# Ariazone 6001 HFO-1234yf (with internal identifier)

# Automotive Air-Conditioning Service Station

# **OPERATOR MANUAL**

This equipment has been extensively researched, designed and developed with the prime objective in satisfying the workshop operator and technician in carrying out the most efficient airconditioning diagnostic and service procedure.

Please follow the proceeding instructions carefully. If there is anything you do not understand fully in the proceeding text or images, please do not hesitate to contact your local distributor or manufacturer.

**IMPORTANT**: This manual contains important information pertinent to operator safety, and must accompany the unit, in the case of sale or transfer to another party.

Manufacturer reserves the right to modify this manual and the unit itself at any time without prior notice

### 1. Introduction

Ariazone 6001 – HFO1234yf is a user-friendly tool specifically designed for the automotive airconditioning technicians to carry out the following functions:

- Testing air-conditioning system
- Refrigerant identification.
- Recover and recycling the refrigerant from air-conditioning system.
- Electronically gauge amount of refrigerant recovered from air-conditioning system.
- Electronically gauge amount of oil removed from air-conditioning system (if any).
- Evacuate air-conditioning system.
- Electronically charge lubricating oil & UV dye by volume into the air-conditioning system.
- Electronically charge refrigerant into the air-conditioning system by weight.
- Electronically displays vent temperature.
- Electronically Flush A/C system (optional).

The unit is suitable for servicing passenger and light commercial vehicles air-conditioning systems

The unit is a microprocessor control system. This provides electronically controlled functions, whilst keeping the operator constantly informed and in full control.

This unit has been designed and build to be long lasting and with high level of reliability including maximum safety for the operator. The operator needs only to be responsible for the correct use and maintenance of the unit, in accordance with the instructions found in this manual.

#### **Environmental information**

This product may contain substances that can be hazardous to the environmental or to human health if it's not disposed of properly.

Electrical and electronic equipments should never be disposed of in the usual municipal waste, but must be separately collected for their proper treatment (recycling).

We also recommend that you adopt appropriate measures for environmental protection: recycling of the internal and external packaging of the product, including batteries (if any).

With your help it is possible to protect our planet and improve the quality of life, by preventing potentially hazardous substances being released in to our environment.

# 2. Important Safety Information's

This unit is simple and reliable in selecting and performing all its functions. Therefore, the user is not exposed to any risk, if the general safety guidelines reported below are followed, in association with proper use and maintenance of the unit (improper use and maintenance will reduce the safety of the unit).

This equipment is to be operated by accredited technician only! Users must have basic knowledge of air-conditioning and refrigeration systems, including potential hazards associated with the handling of refrigerants and systems under high pressure.

**Read this user manual carefully** before start up, connecting and operating the unit. If you do not understand any section of this manual, please contact your nearest distributor or manufacturer.

Handle refrigerant with care as serious injury may occur. Always **wear appropriate protective safety gloves**.

The contact with refrigerant can cause blindness. Always **wear appropriate protective safety glasses**.

- Avoid inhalation of the refrigerant. Use only in well ventilated work areas.

- The power cable may only be connected to a socket with nominal voltage stated on the rating plate, located at the rear of the unit.

- **RISK OF ELECTRICAL SHOCK.** Power lead plug to be connected only to power point with an earth.

- Never operate the equipment with a damaged power lead, replace it immediately. Before removing any protective cover from unit, always unplug power lead from power point.

![](_page_3_Picture_13.jpeg)

- Use only pure R134a refrigerant with this equipment.

- The unit should not be operated with flammable refrigerants (HC of R1234yf).

- Position the unit on all four wheels, on a flat (horizontal) surface so that proper operation of the scales is guaranteed.

- Do not expose the machine to direct artificial heat or rain.

- Do not tamper with or change safety control devices or their settings.

- When (if) transporting the unit, keep upright and if possible remove refrigerant cylinder from platform.

- Do not cover ventilation openings on chassis cover when the unit is operating.

- Maintenance is to be carried out as per the manufacturer recommendation shown in this manual. Only original parts are to be used for maintenance and repairs. Maintenance of the unit must only be performed by an authorized technician.

- Only non aggressive substances to be used for cleaning of the unit.

# 3. Technical Specifications

Refrigerant	HFO-1234yf
Refrigerant Identifier	R1234yf, R134, HC, Air (non-condensables), R22
Electronic scale	+/- 5g resolution
Load cell	60kg with 150% overload capacity
Display	5.7" Touch screen
LP and HP gauges	High Clarity Digital Display
Recovery cylinder	12kg
Recovery pump	Danfoss SC12G,
Recovery rate	600 g/min (liquid state)
Vacuum pump	2 stage, 100 l/min
Vacuum	3 x 10 <sup>-1</sup> Pa
Dimensions	500 mm, 650mm, H-1320 mm (1000mm packed)
Weight	87 kg
Supply voltage	230VAC- 50/60Hz
Power	1800 W
Working conditions	$0^{\circ}$ to 45 $^{\circ}\text{C}$ ambient temperature, up to 100% humidity, 2000m altitude
Noise level	< 70 dB (A)
Fuse	10 amp/250V (slow blow type)
Measuring instrument	I category (Not to be mixed with II, III, IV category)
Approvals	EN 61010-1 Electric safety, EN 55014-1 EMC-CE

# 4. Preparing the Machine for Use

Perform the following steps to prepare the unit before the first use.

- 1. Remove the carton box and styrofoam inserts.
- 2. Check to ensure that all of the accessory components are with the unit:
- Power lead
- Service hoses with quick couplers
- User's manual
- (Optional) Wireless temperature sensor with USB cable

3. Unscrew two securing M6 bolts situated on each side of the bottom of the platform base.

4. Place and secure the unit head, connect the cable (if not).

5. Connect power lead to power socket situated behind the right hand rear wheel, connect power lead plug to suitable power outlet, making sure it has an earth connection.

6. Carefully connect suction and discharge (blue & red) service hoses to the front M12 service ports of the machine.

Blue hose front-left, red hose front-right.

Hook up quick couplers to parking brass adapter (pull back bottom knurled section with fingers and carefully press the coupler into the proper adapter).

![](_page_5_Figure_15.jpeg)

![](_page_6_Picture_1.jpeg)

# 5. Main Components & Features

**Note:** No hand values are incorporated on the unit. A series of electronically controlled values are incorporated to precisely control the functionality of the machine.

**1. LP (Suction) and HP (Discharge) Digital Display** - A large 80 mm x 50 mm digital displays shows A/C suction pressures (low and high pressure). Pressure is displayed in Bar & PSI, depended on the user selection.

**2. Touch Screen 5.7" and control button** – All functions icons are displayed on the LCD touch screen. All functions are selected by touching the appropriate icon on the display. The operator is guided step by step in setting and initiating each selected function.

**3. Stop and Start Button -** The stop and start button are conveniently located on the front panel to give to the operator complete control of the equipment.

4. Printer - The thermal printer will print all results at the end of each function once completed.

**5. USB to WTS charging lead** - The USB port is used for downloading software and charging the wireless temperature sensors.

6. Connecting Cable - A user friendly connecting cable is used to connect the head with IO board.

**7. New Oil 1 Injection vessel** - A large capacity vessel of 300ml is mounted on the left side of the unit to electronically inject the recovered amount of oil back in to air conditioning system, or to select the desired amount of oil to be injected.

**8. New Oil 2 Injection vessel** - A large capacity vessel of 300ml is mounted on the right side of the unit to electronically inject the oil in to the A/C system.

**9. New Oil 3 /UV dye Injection vessel (OPTIONAL)** - A large capacity vessel of 250ml is mounted on left rear side of the unit to electronically inject the oil (or UV dye) in to the A/C system.

**10. New Oil 4 /UV dye Injection vessel (OPTIONAL)** - A large capacity vessel of 250ml is mounted on right rear side of the unit to electronically inject the oil (or UV dye) in to the A/C system.

**11. Recovered Oil Drain Ball Valve** - The unit incorporates an internal oil vessel which measures and retains oil (if any) that is removed from A/C system during the recovery process. The operator is prompted when the valve should be open to drain the internal vessel, when full.

**12. Service hoses** 2m (Suction & Discharge) with R1234yf quick connectors used to connect to the vehicle A/C system.

**13. Service Hoses Storage Ports** - These ports are used to store the suction and discharge service hoses quick couplers to avoid contaminations and damage.

#### 14. Main Power Switch

#### **15. Emergency Stop Button**

**16. Power Inlet Socket** - This socket is used to connect the machine to the power supply via the power lead.

**17. Front Cover** - The cover is to protect the internal components of the machine.

**18. Dispaly head "neck"** with adjustable angle for setting optimum working position of diplay.

**19. Rear Cylinder Cover** - This cover is used to protect the cylinder.

20. Air Purge Button for relasing of non-condensable (air) build up in the refrigerant cylinder.

21. Refrigerant Identificator

#### 6. Switching ON the Machine

![](_page_8_Picture_2.jpeg)

Switch ON the machine power switch.

After the welcome menu, the machine will display the number of hours left before the maintenance service is required.

![](_page_8_Picture_5.jpeg)

Followed by **self purge and hose evacuation** (if necessary). This special function will prevent noncondensable (air) to be pushed in to the cylinder, therefore maintaining maximum refrigerant purity.

Once this function is completed, the main menu is displayed on the LCD.

### 9. Storage Cylinder Filling Procedure (Refrigerant Transfer)

![](_page_13_Picture_2.jpeg)

The purpose of the Refrigerant Transfer mode is to transfer new refrigerant from a storage cylinder into the machine cylinder.

Note: The machine refrigerant cylinder which is situated behind the cylinder cover is supplied empty of refrigerant. The cylinder is evacuated by the manufacturer.

Keep the new refrigerant cylinder sitting upright connect the suction (blue) service hose to new refrigerant cylinder **liquid valve** by using the brass adapter provided. Open **liquid valve** on storage **cylinder** and open suction service hose quick coupling.

![](_page_13_Figure_6.jpeg)

Select Transfer function (by touchhing refrigerant Transfer icon).

![](_page_13_Picture_8.jpeg)

By pressing button switch Identifier icon - ON/OFF.

![](_page_13_Picture_10.jpeg)

The display shows last used selection.

![](_page_13_Picture_12.jpeg)

To change hose selection (only if it's wrong), touch Compressor icon and...

![](_page_13_Picture_14.jpeg)

#### There are 2 options when transfering refrigerant:

1. To select weight to be transfered, touch the Weight icon and by using the keypad select desired...

![](_page_14_Picture_3.jpeg)

2. To transfer the complete amount of refrigerant from the new refrigerant cylinder in to the machine cylinder,

![](_page_14_Picture_5.jpeg)

If is ON, identifier will enter in calibraton mode. NOTE: Machine must be in vacuum.

![](_page_14_Picture_7.jpeg)

When calibration is finished, display will show again the start screen.

If results are good will be printed and the machine will continue with transfer process.

![](_page_14_Picture_10.jpeg)

... amount of refrigerant (in gr) to be transferred into the machine cylinder and touch Confirm icon.

![](_page_14_Figure_12.jpeg)

Finally to start Transfer f-tion touch Confirm icon

![](_page_14_Picture_14.jpeg)

By turning clockwice open the blue (LP) quick coupler and press START button.

![](_page_14_Picture_16.jpeg)

If results are not good will be printed and the machine will abort transfer process. Press STOP button to go back in main screen.

![](_page_14_Picture_18.jpeg)

#### OPERATOR MANUAL

Before transfer process start, the machine will self purge (if required).

During the transfer process the machine will display the amount of refrigerant being recovered.

This process can be paused by pressing Stop button and abort the function totally by pressing the Stop button again or restart the process by pressing the Start button.

Once the machine has reached a vacuum of -0.25 kPa it will enter into recovery pause for duration of 2 minutes to allow for any remaining refrigerant in the cylinder and hoses (if any) to boil off.

.

If after the 2 min. pause there is no further pressure increase in the A/C system the machine will drain and measure the recovered oil (if any).

The display will show the total amount of refrigerant transferred and oil (if any).

This will be displayed until the stop button is depressed which then machine will display main menu again ready to select another function if required.

![](_page_15_Picture_9.jpeg)

![](_page_15_Picture_10.jpeg)

![](_page_15_Picture_11.jpeg)

#### 10. Connecting and testing the A/C system

Use the service hose quick couplers to connect the hoses to the A/C system service ports, bearing in mind that **BLUE** must be connected to the low-pressure **(suction)** side and **RED** to high pressure **(discharge)** side.

![](_page_16_Picture_3.jpeg)

**Important:** Before connecting the quick couplers, clean the a/c ports of any foreign material (grease or dust).

![](_page_16_Figure_5.jpeg)

Winding the hand wheel quick couplers clockwise will allow the refrigerant to flow through the hoses. Turning hand wheel in opposite direction, the flow will be closed. If there is any refrigerant in the air-conditioning system, the pressure displays will indicate pressure.

![](_page_16_Figure_7.jpeg)

The unit digital displays (suction & discharge) are important and important instruments. The digital displays indicate the working pressure of the suction and the discharge side of the A/C system. The pressures are displayed in Metric or Imperial system depended of the user selection. The operator should have basic understanding between gauge reading and air-conditioning system normal operating pressures, in order to correctly diagnose any possible system malfunction.

Above the digital displays is a bar graph which gives an estimation of good, fair or bad working pressures of the A/C system. The black segment on the bar graph is related with the working pressure readings. The bar graph colour coding is only indication.

# 11. Recovery & Recycling Mode

![](_page_17_Picture_2.jpeg)

The purpose of the Recovery & Recycling mode is to recover refrigerant from the air conditioning system, which will condense, purify and store the liquid refrigerant in the unit cylinder ready for re-use.

To select Recovery function, touch the Recovery icon.

![](_page_17_Picture_5.jpeg)

To change (if needed) service port (hose) selection, touch Compressor icon and...

![](_page_17_Picture_7.jpeg)

To recovery desired quantity of refrigerant from A/C system, touch Weigh icon and...

![](_page_17_Picture_9.jpeg)

When selection is finished touch Confirm icon and ...

![](_page_17_Picture_11.jpeg)

The display shows last used selection (usually operator just confirms 100% selection). By pressing button switch Identifier icon - ON/OFF.

![](_page_17_Picture_13.jpeg)

... select the desired A/C service port or both ports. Recovery process is faster when both suction and discharge ports are selected.

![](_page_17_Picture_15.jpeg)

 $\ldots$  and select the desired amount of refrigerant to be recovered. Touch  $\ensuremath{\mathsf{Enter}}$  icon.

![](_page_17_Picture_17.jpeg)

If is ON, identifier will enter in calibraton mode. NOTE: Machine must be in vacuum.

![](_page_17_Picture_19.jpeg)

When calibration is finished, display will show again the start screen.

#### **OPERATOR MANUAL**

... press the start button to start the recovery process

![](_page_18_Picture_2.jpeg)

If results are good will be printed and the machine will continue with Recovery process.

![](_page_18_Picture_4.jpeg)

Before recovery process starts, the machine will self clean the residual refrigerant inside (if any).

NOTE: Machine will NOT START if there is no pressure in the hoses. While analyzing, display will show:

![](_page_18_Picture_7.jpeg)

If results are not good machine will abort Recovery process. Press STOP button to go back in main screen.

![](_page_18_Figure_9.jpeg)

![](_page_18_Picture_10.jpeg)

During the recovery process the machine will display the amount of refrigerant being recovered.

Recovery process can be paused by pressing Stop button and abort the function totally by pressing the Stop button again or restart the process by pressing the Start button.

![](_page_18_Picture_13.jpeg)

Once the machine has reached a vacuum of -25 kPa it will enter into recovery pause for duration of 2 minutes to allow for any remaining refrigerant in the A/C system (if any) to boil off.

If the pressure in the A/C system increases above 0 kPa the machine will automatically return in to recovery rerun to the remove the rest of the refrigerant which has boiled off in the A/C system.

If recovery re-run is initiated again the machine will pull down to a further vacuum of -30 kPa and then it will pause again for a further 2 minutes.

After the 2 minutes of pause if there is no further pressure increase in the A/C system the machine will drain and measure the recovered oil from recovered refrigerant (if any).

![](_page_19_Picture_5.jpeg)

This will be displayed until the stop button is depressed which then machine will display main menu again ready to select another function if required.

Printer will automatically print the report.

![](_page_19_Picture_8.jpeg)

![](_page_19_Picture_9.jpeg)

![](_page_19_Figure_10.jpeg)

#### 12. Evacuation Mode

![](_page_20_Picture_2.jpeg)

In the evacuation mode the air and moisture in the air conditioning system is removed and exhausted to the atmosphere. The evacuation mode runs for a predetermined time selected by the operator.

To select the Evacuation mode, touch the Evacuation Icon.

![](_page_20_Picture_5.jpeg)

To change time selection, touch the Time Icon.

![](_page_20_Picture_7.jpeg)

To change service port (hose) selection, touch Compressor icon and select the desired...

![](_page_20_Picture_9.jpeg)

To change leak test time under vacuum, touch Leak Test icon.

![](_page_20_Picture_11.jpeg)

The display shows last used selection. If set up is OK, just press the confirm icon to start the process.

![](_page_20_Picture_13.jpeg)

By using keypad select desired vacuum time and touch Enter icon to confirm.

![](_page_20_Picture_15.jpeg)

...A/C port. Evacuation process is more efficient when both suction and discharge ports are selected.

![](_page_20_Picture_17.jpeg)

Touch Leak Test icon you want to select leak test time, or touch X icon to abort the leak test *Note: Micro Leak test is optional function.* 

![](_page_20_Figure_19.jpeg)

When the above selections have been made, touch Confirm icon.

![](_page_21_Picture_2.jpeg)

The evacuation function start running for the duration of the time which has been selected.

If the evacuation function is selected and there is residual refrigerant in the air conditioning system, the unit would detect this condition and warn the operator. After this warning the unit will automatically recover the residual refrigerant.

Once it has recovered the entire refrigerant it will start the selected evacuation function automatically.

If a vacuum leak (not reach -80kPa in 3min) is detected during the evacuation process, the leak icon will be displayed.

Once the evacuation time has been completed the machine will perform vacuum test with duration which has been selected.

Once the selected function has been completed successfully, this screen will be displayed. This will be displayed until the stop button is depressed which then machine will display main menu again ready to select another function if required.

Printer will automatically print the report.

and Press Start button to start the evacuation function.

![](_page_21_Picture_11.jpeg)

![](_page_21_Picture_12.jpeg)

![](_page_21_Figure_13.jpeg)

![](_page_21_Figure_14.jpeg)

![](_page_21_Picture_15.jpeg)

# 13. Oil & UV Dye Injection Mode

![](_page_22_Picture_2.jpeg)

The purpose of this function is to batch a user-defined quantity of refrigerant oil or UV dye

![](_page_22_Picture_4.jpeg)

Important: A/C system must be properly evacuated, before new oil or UV dye is injected into.

To select the Oil injection function, touch the Oil injection icon.

![](_page_22_Figure_7.jpeg)

**Note:** If there is no vacuum in the A/C system, this icon will be displayed.

![](_page_22_Picture_9.jpeg)

To change the set up, touch the appropriate Oil vessel icon.

![](_page_22_Picture_11.jpeg)

A/C service port. For oil injection HP discharge (D) line is recommended.

![](_page_22_Picture_13.jpeg)

The display shows last used selection. If the set up is OK, press the confirm icon to start the process.

![](_page_22_Picture_15.jpeg)

**Note:** If needed other combination of oil vessels selection then offered, press stop button to reset the previous selection (in this exam. oil 1 & 2)

![](_page_22_Picture_17.jpeg)

![](_page_22_Figure_18.jpeg)

![](_page_22_Picture_19.jpeg)

To change oil quantity, touch Volume icon

![](_page_22_Picture_21.jpeg)

By using the keypad select oil volume (ml) and touch Enter icon to confirm.

![](_page_23_Figure_2.jpeg)

Press Start button to start the oil injection function.

When the desired selection has been made, touch Confirm icon.

![](_page_23_Picture_5.jpeg)

![](_page_23_Picture_6.jpeg)

15 m 15 m

![](_page_23_Figure_8.jpeg)

Oil injection in progress display.

Once the selected function has been completed successfully this screen will be displayed. This will be displayed until the stop button is depressed which then machine will display main menu again ready to select another function if required.

Printer will automatically print the report.

# 14. Refrigerant Charge Mode

![](_page_24_Picture_2.jpeg)

The purpose of the refrigerant charge mode is to batch a user-defined weight amount of refrigerant into the air-conditioning system.

**Important:** A/C system is always must be properly evacuated and leak tested, before refrigerant is charged

To select Charge function, touch the refrigerant Charge icon.

![](_page_24_Picture_7.jpeg)

To change service port (hose) selection (if needed), touch Compressor icon and...

![](_page_24_Picture_9.jpeg)

To change the amount of refrigerant to be charged, touch Weight icon for manual selection.

![](_page_24_Picture_11.jpeg)

Charge amount selection can be also done from database by touching the Car icon.

![](_page_24_Picture_13.jpeg)

The display shows last used selection. If set up is OK, just press the confirm icon to start the process.

![](_page_24_Picture_15.jpeg)

... select the desired A/C service port (or both) for refrigerant charge.

![](_page_24_Picture_17.jpeg)

![](_page_24_Figure_18.jpeg)

![](_page_24_Picture_19.jpeg)

By using up and down arrow icon select the vehicle manufacturer and touch Enter icon.

![](_page_24_Picture_21.jpeg)

#### **OPERATOR MANUAL**

Select the vehicle model and touch Enter icon.

![](_page_25_Picture_2.jpeg)

Select the vehicle production year and touch Enter icon.

![](_page_25_Picture_4.jpeg)

Touch Enter icon to confirm selection.

![](_page_25_Picture_6.jpeg)

Refrigerant charge in progress display.

While charge process is ON, if needed operator can change the service port (hose) selection by pressing one of the Compressor icons bellow.

Once the charging function has been completed successfully, this screen will be displayed. This will be displayed until the stop button is depressed which then machine will display main menu again ready to select another function if required.

Printer will automatically print the report.

Select the vehicle engine and touch Enter icon.

![](_page_25_Picture_12.jpeg)

When the desired selection has been made, touch Confirm icon.

![](_page_25_Picture_14.jpeg)

#### Press Start button to start the charge function.

![](_page_25_Picture_16.jpeg)

![](_page_25_Picture_17.jpeg)

![](_page_25_Picture_18.jpeg)

# 15. Auto Mode Function

![](_page_26_Picture_2.jpeg)

The unit incorporates a Fully Auto function, where the operator simply sets the parameters and the machine will perform and complete all operations automatically without any further intervention from the operator.

Each operation is recorded and printed at the completion of the full cycle. If any fault is detected during the fully auto cycle the unit will warn the operator.

To set the fully auto mode, touch the AUTO icon.

![](_page_26_Picture_6.jpeg)

All settings can be changed in few steps. To change evacuation time touch the Vacuum icon.

![](_page_26_Picture_8.jpeg)

To change the oil volume settings touch Oil Set Up icon.

![](_page_26_Picture_10.jpeg)

Touch the Oil icon for oil vessel set up, X icon to turn off the function, or Volume icon to change..

![](_page_26_Picture_12.jpeg)

The display shows last selection made. If agree with the current settings, just touch Confirm icon.

![](_page_26_Picture_14.jpeg)

To change the vacuum time, touch Time icon. To change leak time touch Leak Test icon.

![](_page_26_Picture_16.jpeg)

Touch Oil icon to change new oil quantity to be injected in system and/or UV Dye icon for UV dye.

![](_page_26_Picture_18.jpeg)

... oil volume. Simply by using the keypad select new volume and touch enter icon.

![](_page_26_Picture_20.jpeg)

#### **OPERATOR MANUAL**

To change charge amount, touch the refrigerant Charging icon.

![](_page_27_Picture_2.jpeg)

Select the desired A/C service port (or both). Full automatic function should be done with both suction and discharge ports open.

![](_page_27_Picture_4.jpeg)

#### Note:

Refrigerant Identifier ON / OFF is defined in Recovery mode.

The unit will perform all tasks in one automatic cycle and will print reports at the end of each single operation.

To set the refrigerant weight touch the Weight icon, or refrigerant charge weight can be selected by using database by touching the Car icon. See Charge Function (page 24).

![](_page_27_Figure_9.jpeg)

When the desired selection has been made, touch Confirm icon.

![](_page_27_Picture_11.jpeg)

Press Start button to start the function. Check if the both quick couplers are fitted (flow open).

![](_page_27_Picture_13.jpeg)

# 16. Cylinder Air Purge

Once a week before using machine, check if there is non-condensable (air) build up in the refrigerant cylinder.

![](_page_28_Figure_3.jpeg)

First, measure the ambient temperature. Then read the cylinder pressure on front display and compare it with the temperature pressure chart, affixed to the machine.

If the cylinder pressure is higher than the pressure/temperature chart, there are non-condensable gases (air) in the unit cylinder.

Press air purge button to purge the non-condensable gases (air) from the cylinder and bring back the pressure to the recommended chart values.

![](_page_28_Picture_7.jpeg)

# When air purging is possible to release HFO 1234yf, which is midly flammable refrigerant. Service technicians should not smoke or have any open flame present while air purging the cylinder.

![](_page_28_Picture_9.jpeg)

**Important:** After recovery process it is normal that cylinder pressure is higher than the pressure/temperature chart shows. Always read the cylinder pressure first thing in the morning before operating the machine.

Ambient Temperature (C°)	Cylinder gauge readings (Bar)	Ambient Temperature (C°)	Cylinder gauge readings (Bar)
6	2.84	30	6.82
8	3.09	32	7.26
10	3.36	34	7.71
12	3.64	36	8.18
14	3.94	38	8.66
16	4.25	40	9.17
18	4.57	42	9.70
20	4.90	44	10.24
22	5.26	46	10.81
24	5.62	48	11.40
26	6.01	50	12.01
28	6.41	52	12.62

Example: Ambient temp. 20 °C, the cylinder pressure should be 4.9 bar.

# 17. A/C Flushing Mode (OPTIONAL)

![](_page_29_Picture_2.jpeg)

The purpose of the A/C flushing mode is to clean the A/C system inside from dirt and particles. A/C system is cleaned by flushing it with liquid refrigerant with high flow rate and against the normal flow direction.

![](_page_29_Picture_4.jpeg)

**Important:** The flushing procedure should only be preformed when the compressor has been disconnected from the A/C system including orifice tube or expansion valve. Special external filtration kit MUST be fitted on discharge (red) service hose port.

![](_page_29_Figure_6.jpeg)

After the connecting has been made, follow next procedure for flushing the A/C system.

Before start Flushing A/C system must be evacuated for minimum 15 minutes and leak tested.

Select the Evacuation mode.

![](_page_29_Picture_10.jpeg)

For time selection, touch the Time Icon.

![](_page_29_Picture_12.jpeg)

The display shows last used selection.

![](_page_29_Picture_14.jpeg)

#### Select min.15 minutes vacuum time.

![](_page_29_Picture_16.jpeg)

#### **OPERATOR MANUAL**

#### Touch Compressor icon.

![](_page_30_Picture_2.jpeg)

Touch Leak Test icon.

![](_page_30_Figure_4.jpeg)

When the above selections have been made, touch Confirm icon.

![](_page_30_Picture_6.jpeg)

Once the evacuation function has been completed successfully, this screen will be displayed. This will be displayed until the stop button is depressed which then machine will display main menu again ready to select another function if required.

Printer will automatically print the report.

and select both a/c ports (middle icon)

![](_page_30_Figure_10.jpeg)

# Select min.3 minutes leak test under vacuum and touch Enter icon to confirm

![](_page_30_Figure_12.jpeg)

and Press Start button to start the evacuation function.

![](_page_30_Figure_14.jpeg)

![](_page_30_Picture_15.jpeg)

To select the flushing mode touch the flush icon

![](_page_31_Picture_2.jpeg)

When function activated and external filtration kit is fitted, touch the time icon to select the flushing time (minimum time is 30 minutes).

![](_page_31_Picture_4.jpeg)

Touch the confirm icon and press the Start button to start the process.

![](_page_31_Picture_6.jpeg)

The refrigerant which is used to flush the A/C system is purified and return at the cylinder to be used again.

Once the Flushing function has been completed successfully, this screen will be displayed. This will be displayed until the stop button is depressed which then machine will display main menu again ready to select another function if required.

Printer will automatically print the report.

To activate Flushing function contact your distributor.

![](_page_31_Picture_11.jpeg)

By using the keypad, select flushing time and touch Enter icon to confirm.

![](_page_31_Picture_13.jpeg)

The selected function will now be performed automatically.

![](_page_31_Picture_15.jpeg)

![](_page_31_Picture_16.jpeg)

# 18. Settings & Optional Functions

#### 18.1. Main Unit Set Up

To enter into the Set Up Mode, touch the main Settings icon.

![](_page_32_Picture_4.jpeg)

The display will show the unit Set Up main screen.

Touch the unit Set Up icon (left bottom).

![](_page_32_Picture_7.jpeg)

LANGUAGE	English	HEATER:	Off -
DATE:	12 Jan 11	MICRO LEAK T	EST: 6000-
TIME:	11:14	VACUUM TEST:	20 -
KEY TONE:	On	AUTOPRINT:	On -
CONTRAST:	18	OIL 3 & 4:	Off -
PRESSURE:	kPa, bar	HOSE PRE-CHR	RG: 60 -
WEIGHT:	kg,ml	WORKSHOP:	Off -
Evit	Down	Edit Un	Enter

With Up and Down keys select the desired function followed by touching the Edit button to make the desired changes. Once the selection has been made, touch the Enter button to lock in the change.

- 1. Language Selection
- 2. Date Setting
- 3. Time Setting
- 4. Key Tone Switching On and OFF the key tone
- 5. Contrast Adjusting screen clarity
- 6. Pressure Selecting Metric or Imperial system (kPa or PSI)
- 7. Weight Selecting Metric or Imperial system (kg or lb)
- 8. Heater Switching ON and OFF the automatic heating of the storage cylinder
- 9. Micro Vacuum Leak Test (OPTIONAL) Switching ON and OFF the leak warning under vacuum
- **10. Vacuum Leak Test** Adjusting sensitivity
- 11. Auto Print Switching the printer ON and OFF
- 12. Oil 3 & 4 (OPTIONAL) Activating oil vessel 3 & 4
- 13. Hose Pre-Charge Setting the service hose pre-charge value
- 14. Workshop Workshop details on printing report ON or OFF.

#### 18.2. How to set the workshop data on print report?

![](_page_33_Picture_2.jpeg)

Enter into the Set Up Mode by touching the main Settings icon.

![](_page_33_Picture_4.jpeg)

With arrows keys UP and DOWN select WORKSHOP and press Edit icon.

![](_page_33_Picture_6.jpeg)

By Using keyboard display, write 1<sup>st</sup> row of the workshop data and press arrow Down key.

![](_page_33_Picture_8.jpeg)

![](_page_33_Picture_9.jpeg)

Small letters and symbols

![](_page_33_Picture_11.jpeg)

Delete all

Touch the unit Set Up icon (left bottom).

![](_page_33_Picture_14.jpeg)

With (+) and/or (–) keys set the workshop to be ON. Press Enter key.

![](_page_33_Picture_16.jpeg)

Now you can write  $2^{nd}$  row of the workshop data. Unit allows maximum 5 rows x 20 letters.

![](_page_33_Picture_18.jpeg)

#### 18.3. Wireless Temperature Sensors Set Up (Optional)

Enter into the Set Up Mode.

![](_page_34_Picture_3.jpeg)

Press and hold the wireless temp sensor button until the sensor data appears on the display.

![](_page_34_Picture_5.jpeg)

By using the Up or Down icons selects the appropriate sensor and touch enter icon. Vent sensor is standard, other 4 are OPTIONAL.

![](_page_34_Picture_7.jpeg)

Touch the Wireless Sensor icon.

![](_page_34_Picture_9.jpeg)

The sensor is still not set. Touch Sensor type icon to select appropriate sensor.

![](_page_34_Picture_11.jpeg)

The appropriate sensor will now be displayed, press Enter icon to confirm.

Perform the same steps fop other sensors settings.

![](_page_34_Picture_14.jpeg)

	State	Colours	Description
	Normal		Normal indication: bound to ARP and battery ok.
	Not Bound		Not bound to any ARP.
ensor	No signal		Bound but not receiving signal from ARP.
	Battery Low		Battery low.
	Charging		Battery is charging.
	Charged		Battery is fully charged (when charger plugged in).
	Charge Fault		Charger voltage too high (> 6.0V).
	Button pressed		Button is pressed. LED on (not flashing).
	Ready to Power off		Button held for 2s. Ready to power off.
	Force Unbind		Button held for 15s. Ready to unbind sensor from ARP.
	Internal Fault		# flashes indicates error (see table below).

The ARP Wireless Temp Sensor has a single bi-colour LED. The Table above outlines the meaning of each indication sequence. If the wireless temp sensor is not communicating with the ARP for a period of 20 minutes it will automatically switch it self off to preserve the battery energy.

#### 18.4. Refrigerant Management, Operation History and Working Hours Reset

![](_page_35_Picture_2.jpeg)

Touch the main Set Up icon.

The display will show the cycle operation history. The operator can read total recovered refrigerant and/or oil weight, total charge weight and total refrigerant transfer.

Touch CLEAR OFF icon to clear previous history (all cycles will be set back to 0).

After the machine has been completely serviced according to manufacturer's specifications, reset the filter replacement interval on new 99 working hours.

Touch 100 working hour icon, enter PIN code (4 numbers) and press Confirm icon.

Touch the Sum icon.

![](_page_35_Picture_9.jpeg)

0.00	Queles	Dent	Manuel

#### 18.5. Refrigerant Recycling

![](_page_36_Picture_2.jpeg)

The purpose of the Refrigerant Recycling mode is to purify the refrigerant from other recovery cylinder which has not been attached to this machine.

Remove the cylinder cover. Turn off the cylinder valves and cylinder hose ball valves (red and blue). Carefully disconnect the hoses from cylinder (wear protective glasses and gloves). Take off the original machine storage cylinder and place recovery cylinder which needs the refrigerant to be recycled. Connect the hoses to the recovery cylinder (making sure that blue hose is connected on vapour and red on liquid cylinder valves), open ball valves and cylinder valves.

Touch the main Set Up icon.

![](_page_36_Picture_6.jpeg)

Touch the time icon to select the flushing time.

![](_page_36_Picture_8.jpeg)

Touch the confirm icon.

![](_page_36_Picture_10.jpeg)

The selected function will now be performed automatically. After the completion of this function remove the recovery cylinder and refit the standard machine storage cylinder. Touch refrigerant recycling icon to select the function.

![](_page_36_Figure_13.jpeg)

By using the keypad, select recycling time and touch Enter icon to confirm.

![](_page_36_Picture_15.jpeg)

Press the Start button to start the process.

![](_page_36_Picture_17.jpeg)

![](_page_36_Picture_18.jpeg)

Notes:

# EC DECLARATION OF CONFORMITY

The company: Ariazone International - Europe

Hereby declares that the product:

#### Ariazone 6001 HFO 1234yf - Automotive A/C Service Station

Meets all requirements of European Directives: **2006/95/EC (ex 73/23/EEC) Low Voltage Directive 2004/108/EC Electromagnetic Compatibility 98/37/EC Machine Directive** and subsequent amendments entered in force to the date of declaration. The following standards and technical specifications, conforming to EEC Harmonized Regulations were applied:

#### EN 61010-1:2001 with cross references: EN 60227, EN 60245, EN 60309:2003; EN 60799, EN 60804, EN 60825-1 EN 55014-1; EN ISO 12100-1; EN ISO 12100-2; EN ISO 12100-1:2003; EN ISO 12100-2:2003

The producer also declares that equipment confirms Directives and Standards when used according to manufacturer specifications.
